Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

poreilly@licataandtyrrell.com

Office Action Summary

Application No.

10/553,585

Applicant(s)

FOOTE ET AL.

Examiner

GARY W. COUNTS

Art Unit

1641

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 16 April 2010.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 4 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 4 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/CD)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/16/10 has been entered. Currently, claim 4 is acknowledged and has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
5. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Zoghbi et al (US 2004/0243010).

Zoghbi et al disclose determining the level of BNP in samples obtained from a patient. Zoghbi et al disclose that the patient can be suspected of having a coronary artery disease (e.g. para 0002, 0019, 0054, 0061). Zoghbi et al discloses the sample can be a blood sample (e.g. p. 9). Zoghbi et al disclose determining the level of BNP in a sample from the patient prior to exercise to establish a baseline (control) and also teaches determining the level of BNP in a sample from the same patient post exercise (abstract, pgs 9-10, particularly p. 10, Table 1, and Example 7). Zoghbi et al discloses that the levels of the BNP are determined in pg/ml before and immediately after exercise of the patient and specifically teaches an increase in the levels after exercise (e.g. see Table 1 and Example 7, lines 1-3 of paragraph 0104). Zoghbi et al specifically teaches comparing the level of BNP 13.4 pg/ml before exercise to that of 26.6 pg/ml immediately after exercise in the patient. Thus, Zoghbi et al shows an increase

(change) of 13.2 pg/ml in the post exercise sample compared to the pre-exercise sample ($26.6 - 13.4 = 13.2$) (greater than 10 pg/ml)(Table 1). Zoghbi et al disclose that levels of BNP increased from baseline to post-exercise. Zoghbi et al disclose that the exercise stress test can be performed with myocardial perfusion imaging wherein a dual isotope, rest-stress protocol is used (p. 6, para. 0070). Zoghbi et al also disclose that the lowest detectable measurement of BNP can be as low as 5 pg/ml (e.g. Example 2).

Zoghbi et al fails to specifically teach determining the absolute level of change in an individual and diagnosing based on this level in the individual. However, Zoghbi et al specifically teaches that the methods are for a patient (an individual)(e.g. abstract, para 0014, 0052, see also above) and specifically teaches a nexus between mean BNP levels in a population of patients and specifically teaches that the population of patients showed and increase of 13.2 pg/ml in the post exercise sample compared to the pre-exercise sample ($26.6 - 13.4 = 13.2$) (greater than 10 pg/ml)(Table 1). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made determine pre-exercise and post-exercise levels in an individual suspected of suffering ischemic cardiovascular disease and determine the absolute change in the post-exercise level compared to the pre-exercise level because Zoghbi et al specifically shows that there is increased BNP levels in post exercise ischemic patients as compared to pre-exercise patients and also specifically teaches that the methods are for the early detection and diagnosis of coronary artery disease in a patient (abstract). Therefore, one of ordinary skill would have a reasonable expectation of success incorporating the teaching of Zoghbi et al for determining an absolute BNP change in

pre-exercise and post exercise in an individual and detecting cardiac ischemia in the individual.

Response to Arguments

6. Applicant's arguments filed 03/17/10 have been fully considered but they are not persuasive.

Applicant argues that Zoghbi et al disclose use of an entirely different endpoint for assessing risk of ischemia in patients, including the method involving measurement of blood levels of BNP in the same patient both before and after exercise as taught in Example 5, Table 1, page 9. Applicant states that although BNP increased from baseline to immediately post exercise in individuals with ischemia as well as those without ischemia, the actual pg/ml change in BNP levels post exercise in patients either with or without ischemia had a median value of 15.5 pg/ml in ischemia patients, i.e. patients diagnosed with ischemia, and that the difference between the change in pg/ml of BNP between ischemic patients and those identified as being not ischemic was not statistically significant (p-value reported to be 0.115).

This is not found persuasive because as stated in the previous office actions this comparison is between non-ischemic patients vs. ischemic patients (i.e. sample from different patients).

Applicant further argues that nowhere does Zoghbi et al disclose the actual magnitude of changes in blood levels of BNP in an individual patient after exercise as compared to before exercise. Applicant argues that the values that the Examiner points to are mean values not individual patient values. The Examiner agrees that the

increase of 13.2 ($26.6 - 13.4 = 13.2$) shown in the post exercise ischemic patients from that of the pre-exercise ischemic patients in para 0102 and Table 1 is a mean value of the ten patients. However, as stated above although this teaching is directed to a value obtained from a population of patients. Zoghbi et al teaches that the methods are to be used for detecting in an individual and specifically teaches that there is an nexus for increase BNP levels post exercise as compared to pre-exercise levels and it would have been obvious to one of ordinary skill in the art at the time the invention was made to determine pre-exercise and post-exercise levels in an individual suspected of suffering ischemic cardiovascular disease and determine the absolute change in the post-exercise level compared to the pre-exercise. Thus, for the reasons stated above it is the Examiner's position that the reference explicitly provide the motivation needed for the rejection. However, it is noted that while it is true that when obviousness is based on a particular prior art reference, there must be a showing of a suggestion or motivation to modify the teachings of that reference, it is also true that this suggestion or motivation need not be expressly stated. *Cable Elec. Prods., Inc. v. Genmark, Inc.*, 770 F.2d 1015, 1025, 226 U.S.P.Q. 881, 886 (Fed. Cir. 1985). The conclusion of obviousness may be made from common knowledge and common sense of a person of ordinary skill in the art without any specific hint or suggestion in a particular reference.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to GARY W. COUNTS whose telephone number is (571)272-0817. The examiner can normally be reached on M-F 8:00 - 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Shibuya can be reached on (571) 272-0806. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
